### Three Types of Lists

- **Unordered**
- **Ordered**
- **Definition**

<table>
<thead>
<tr>
<th>Tag Set</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;ul&gt;</code></td>
<td>Creates an unordered list, which is a bulleted list. Default bullet is disc.</td>
</tr>
<tr>
<td><code>&lt;ol&gt;</code></td>
<td>Creates an ordered list, which is a numbered/lettered list. Default is numbers with decimal.</td>
</tr>
<tr>
<td><code>&lt;dl&gt;</code></td>
<td>Creates a definition list.</td>
</tr>
</tbody>
</table>

| `<li>` | Inserts the actual “bullet” or “number” when using a UL or OL. |
| `<dt>` | First part of a definition list. Used before the word that is on a line by itself/not indented. Stands for “definition term.” |
| `<dd>` | Used within a definition list after the DT; this indents the next part on the following line. Stands for “definition definition.” |

#### List Example:

**Dog Names:**
- Rover
- Fido
- Max

**Great Colors:**
1. Red
2. Blue
3. Orange

**Dog**
- Animal that barks

**Cat**
- Animal that meows

**Mouse**
- Animal that squeaks

**Code:**

```html
<p>Dog Names:</p>
<ul>
  <li>Rover</li>
  <li>Fido</li>
  <li>Max</li>
</ul>

<p>Great Colors:</p>
<ol>
  <li>Red</li>
  <li>Blue</li>
  <li>Orange</li>
</ol>

<dl>
  <dt>Dog</dt>
  <dd>Animal that barks</dd>
  <dt>Cat</dt>
  <dd>Animal that meows</dd>
  <dt>Mouse</dt>
  <dd>Animal that squeaks</dd>
</dl>
```
Lists can be nested inside one another. Just keep the middle list together and then continue with the previous list.

Here is a paragraph followed by a list:

- List item
- List item
- List item

Oops, I didn’t turn off the list. See this? If I would have turned it off, it would be all the way back at the left like the first paragraph. But, I didn’t. So, it’s messed up. Even this line coming up will be scooted over. Look!

Great Colors:

1. Red
   - Maroon
   - Cherry
   - Ruby
   - Magenta
2. Blue
3. Orange

ALERT!! If you forget to turn off a list, the rest of the page “scoots over” because the list tag indents any text that comes after it. Always be sure to turn off the list before you go on.
Styling Lists

Bullet Types (circle, square, default is disc)  
Example  

Example  

Number Types (lower-alpha, upper-alpha, upper-roman, lower-roman, default is decimal)  
Example  

Note that the types are singular, not plurals. No S at the end!
